**Wednesday 5 November 2014**

**Time allowed: 2 hours**

*For candidates applying for Physics, Physics and Philosophy, Engineering or Materials*

---

**There are two parts (A and B) to this test, carrying equal weight.**

**Part A: Mathematics for Physics Q1-Q9 [50 Marks]**

**Part B: Physics Q10-Q19 [50 Marks]**

Answers should be written on the question sheet in the spaces provided and you should attempt as many questions as you can from each part.

Marks for each question are indicated in the right hand margin. There are a total of 100 marks available and total marks for each section are indicated at the start of a section. You are advised to divide your time according to the marks available, and to spend equal effort on parts A and B.

**No calculators, tables or formula sheets may be used.**

Answers in Part A should be given exactly unless indicated otherwise. Numeric answers in Part B should be calculated to 2 significant figures.

Use  $g = 10 \text{ m s}^{-2}$ .

**Do NOT turn over until told that you may do so.**

## **Part A: Mathematics for Physics [50 Marks]**

1. A jar contains buttons of four different colours. There are twice as many yellow as green, twice as many red as yellow and twice as many blue as red. What is the probability of taking from the jar:

- a) a blue button
- b) a red button
- c) a yellow button
- d) a green button

(You may assume that you are only taking one button at a time and replacing it in the jar before selecting the next colour.)

[4]

2. What is the sum of the following terms:

$$1 + e^{-x} + e^{-2x} + \dots$$

Over what range of  $x$  is the solution valid?

[4]

3. Evaluate the integrals:

a)  $\int_0^{\pi/2} \frac{\cos x}{1 + \sin x} dx$

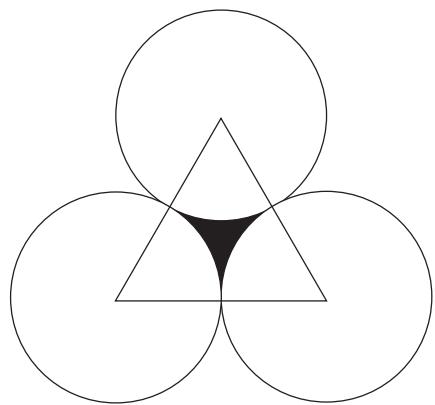

b)  $\int_0^2 \frac{x}{x^2 + 6x + 8} dx.$

[6]

4. What is the coefficient of  $x^7$  in the expansion of  $(1 + 2x)^4(1 - 2x)^6$ ? [4]

5. Consider the shape shown below. What is the area of the equilateral triangle (with length of side =  $2r$ ) which is not enclosed within the circles (each with radius =  $r$ ), and which is shown shaded black in the figure?

[5]

6. You want to make a snowman out of modelling clay. The snowman consists of 2 spheres, where one sphere has a radius  $r$ , the other has a radius  $2r$ . The modelling clay comes in the form of a cylinder with radius  $r/2$ . What length of modelling clay is required to make the snowman? [5]

7. Sketch the region defined by:

$$y \leq x^2 \text{ and } 4 \geq y \geq 0 \text{ and } y \geq 2x - 4.$$

Evaluate the area defined by the above inequalities.

[7]

8. If  $f(x) = e^x$  for  $x < 0$  and  $f(x) = e^{-x} + 2x$  for  $x \geq 0$ , sketch the function  $f(x)$  and its first, second and third derivatives. [8]

9. Find the equations of the tangents drawn from the point  $(-4, 3)$  to the circle  
 $x^2 + y^2 = 5$ . [7]

## **Part B: Physics [50 Marks]**

### **Multiple choice (6 marks)**

Please circle **one** answer to each question only.

10. Excluding Pluto, for the planets in our solar system, in order of increasing mean distance from the Sun, which of the following statements is/are correct?

- i) the duration of the day on each planet increases
- ii) the duration of the year on each planet increases
- iii) the size/volume of the planets increases
- iv) the number of moons of each planet increases
- v) the planets change from rocky to gas giants

**A** statements i) and ii) and v)

**B** statement ii) only

**C** statements iii) and iv)

**D** statements ii) and v)

[2]

11. In which part of the Electromagnetic Spectrum do waves have a frequency of approx. 100 GHz?

- A X rays
- B visible light
- C microwave
- D radio wave

[2]

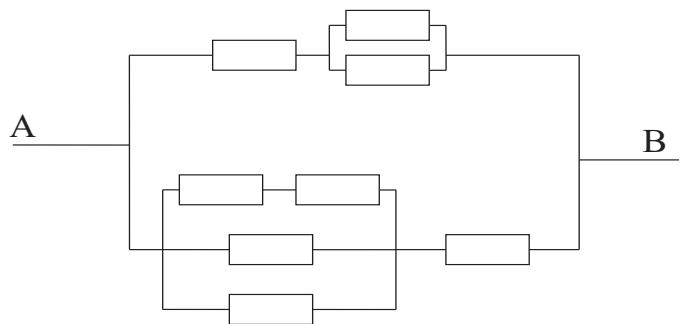

12. An object with small mass becomes detached from the International Space Station (ISS) while it orbits the Earth. Its relative velocity with respect to the ISS can be neglected. Would the object

- A follow ISS in its orbit
- B go straight along a direction tangential to ISS orbit at the point when it became detached
- C fall straight down towards the Earth
- D stay still with respect to the Earth

[2]

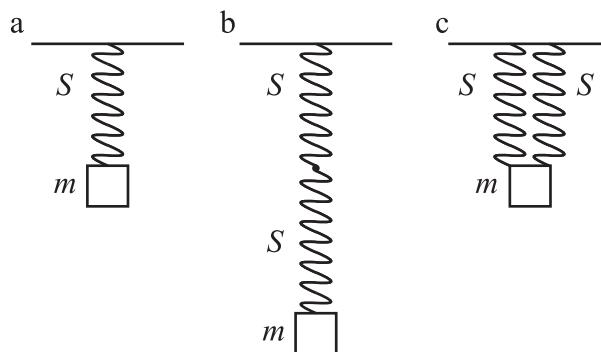

## Written answers (24 marks)

13. Given the circuit below, where all resistors have the same value ( $= R$ ), what is the resistance between A and B? [5]

14. A mass  $m$  is attached to a spring  $S$  (as sketched in figure **a** below) and oscillates with a period  $T$ . What would be the period of the oscillation if two springs  $S$  are connected in series (figure **b**) or in parallel (figure **c**)?

What would be the period of the oscillations in case (a) on a planet with surface gravity  $2g$ ? [4]

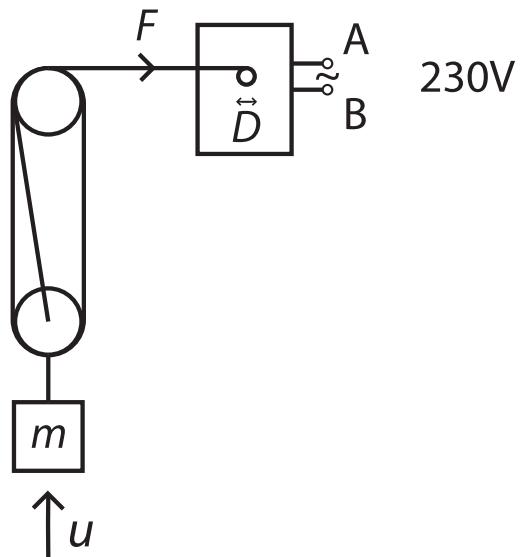

15. An electric motor is lifting a mass via a system of pulleys as sketched below. The motor is powered by a voltage source of 230 V. The diameter of the motor winding reel is  $D = 5$  cm and a mass  $m = 100$  kg is being lifted with a speed  $u = 0.5$  m/s. The masses of the pulleys and the string can be neglected.

What is the electric current driving the motor?

What is the angular velocity of the motor's winding reel?

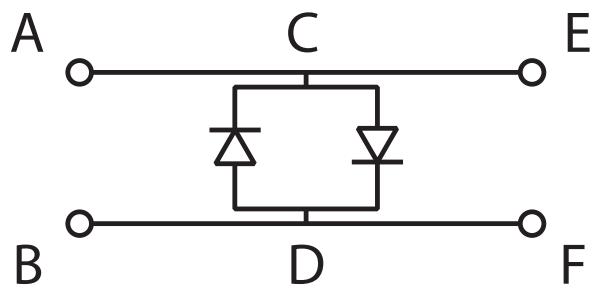

What is the force  $F$  with which the motor is pulling?

[5]

16. Two diodes are connected as sketched below. Sketch the current flowing between points C and D as a function of voltage applied between points C and D.

A sensitive amplifier is connected to terminals E and F to measure small electric signals from an instrument connected to terminals A and B. From time to time there are discharges in the instrument which might destroy the amplifier if the amplifier is connected to the instrument directly, without the diodes. Explain briefly how the diodes protect the amplifier. [4]

17. For this question you may assume that the electrostatic potential energy of two positively charged particles (with charge  $+Q_1$  and  $+Q_2$ ) separated by a distance  $x$  is given by

$$k \frac{Q_1 Q_2}{x}$$

where  $k$  is a constant.

Two charged particles are placed a distance  $d$  apart from each other. One has charge  $= +Q$  and mass  $= m$ , whilst the other has charge  $= +2Q$  and mass  $= 2m$ . The charges are initially held stationary, but are then released. Find an expression for the maximum speed of the particle with mass  $= 2m$ .

[6]

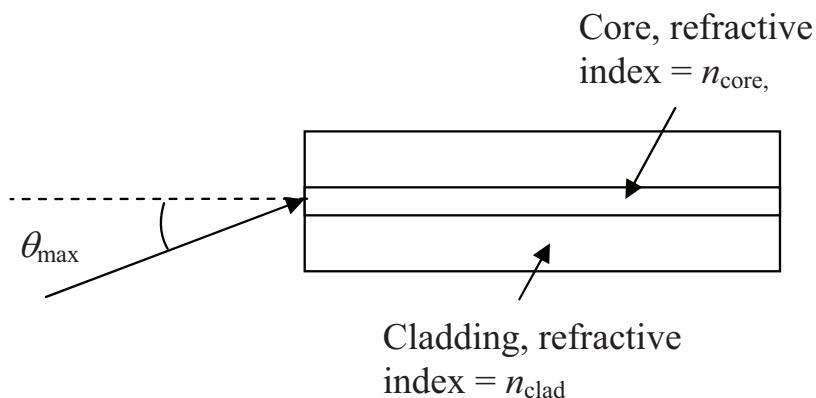

## Long questions (20 marks)

18. This question concerns total internal reflection, optical fibres and refraction. You may assume that the refractive index of glass is larger than that of water, and that the refractive index of water is larger than that of air.

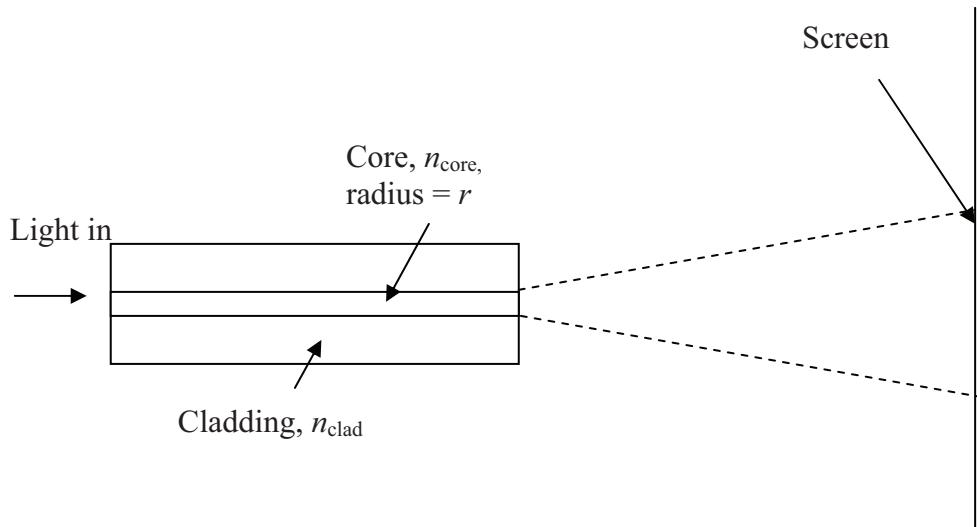

a) Explain what is meant by the phrases “total internal reflection” and “critical angle”. (You are encouraged to use a diagram to explain your answer.) [2]

b) Derive an equation relating the critical angle and the refractive indices of two materials,  $n_1$  and  $n_2$  where  $n_2 < n_1$ . [2]

- c) An optical fibre is usually made of two materials - a core and a cladding as shown in the diagram below (not drawn to scale).

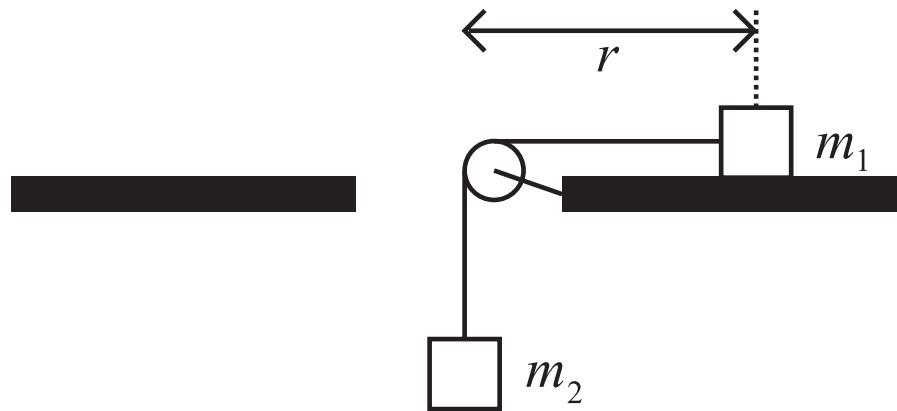

Light may only be transmitted along the fibre if the incident angle of the light is less than a maximum angle  $\theta_{\max}$ . By using your expression from part b) and Snell's law, or otherwise, derive an expression for  $\theta_{\max}$  in terms of the core and cladding refractive indices only. [3]

- d) In an experiment, light is transmitted along the glass fibre before leaving at a perfectly vertical end. A screen is placed a long distance away from the end of the fibre and a uniform circular spot is seen as shown above. A small glass tank containing water is placed in front of the beam so it perfectly touches the end of the fibre. You may assume the tank is parallel to the screen. On a copy of the above diagram, sketch how the extent of the spot on the screen changes. [2]

- e) The tank is kept in place and now white light is used instead of a laser.  
What will the image now look like? [1]

19. Two masses  $m_1$  and  $m_2$  are connected by a massless, non-extensible string supported by a massless pulley attached to a table with a hole in the middle; see sketch below.

- a) Assuming no friction, derive an expression for the acceleration of the masses and for the tension of the string.

[2]

Now and for the rest of this question, consider friction acting on the table but not on the pulley. Friction force  $F_{fr}$  is proportional to the mass's weight;  $F_{fr} = \mu_s mg$  or  $F_{fr} = \mu_d mg$  depending whether the mass is at rest ( $\mu_s$  = static friction coefficient) or in motion ( $\mu_d$  = dynamic friction coefficient). Both coefficients are known.

- b) Derive expressions for the acceleration of the masses and for the tension of the string. What condition needs to be satisfied for  $m_1$  to accelerate?

[3]

- c) The table on which the mass  $m_1$  is resting is now rotating about the vertical axis going through the middle of the table with angular speed  $\omega$ . Assuming that the object with mass  $m_1$  can be treated as point like, derive expressions for the minimal,  $r_{\min}$ , and maximal,  $r_{\max}$ , distance between  $m_1$  and the axis of rotation such that for  $r_{\min} < r < r_{\max}$ ,  $m_1$  will not be moving radially.
